PLACE ACQUIRED	DEGIKIN	AFTER UST	NO. OF ENCLS.	L WAR
DATE OF INFO.		25X1C 25X1X	SUPPLEMENT TO REPORT NO.	N WHI.

- 1. The Jenapharm plant in Jena (M 51/Y 66) has started the production of l-ascorbic acid with a monthly production of 150 kg. The production manager of the ascorbic acid installation is Dr. Siebenmark (fnu). The production of this item has met with difficulties, and the plant must work day and night to fulfill the production quota. The production of ascorbic acid in ampule form is still difficult because of the shortage of a suitable stabilizer and because of the poor quality of class used in the ampules.
- 2. The Jenapharm plant has also started the production of streptomycin. Because of urgent requirements, this product is dispensed as a raw drug to clinics, including the children's clinic of the University in Jena. The production of depot (sic) penicillin, in oil and water, is being increased.
